# Emergent

## Description

Emergent is an app for ensuring the safety people in a location. It enables people report emergency incident that require immediate attention with an image as a proof. It also has a news feed aspect for updating users on the latest emergency news in their region. Users also have the ability to upload their own news item to be reviewed. Finally there's a location part which allow users to ask for community help and also allow other people around to see those who need help and come around to help.

## Intended User

Emergent is for everyday people who are concerned about their safety.

## Features

- Take Pictures
- Send Email
- Check maps

Many people were hoping that if the Democrats won control of Congress they would reverse the online gambling ban, but experts doubt they will even try or that if they do that they will be successful. Once the bill was passed and signed into law by the president, it became much harder to reverse the law. The democrats would need to bring up the law and get it to a vote, then after the vote passed it needs to go to the president for his signature. The problem with this is that the current president is the one who signed the bill into law in the first place.

## Key Considerations

How will your app handle data persistence?

Persistence data in the app would be managed using realm library.

Describe any edge or corner cases in the UX.

Location must be persisted immediately a user does a community report.

Describe any libraries you'll be using and share your reasoning for including them.

1. Glide to handle the loading and caching of images.
2. Retrofit for networking.
3. Realm for data persistence.

**Describe how you will implement Google Play Services or other external services.**

1. Google play map would be used for the google map user interface.
2. Google location service would be used for getting user location and pinning their community help request on the map for others to view.

## Next Steps: Required Tasks

### Task 1: Project Setup

- Configure libraries
- Get keys for google play services.

### Task 2: Implement UI for Each Activity and Fragment

- Build UI for MainActivity
- Build UI for News Feed Activity
- Build UI for Detailed News
- Build UI for adding News
- Build UI for Map interface

### Task 3: Handle Networking

- Consume news api with retrofit
- Implement loaders and UI for the news item

### Task 4: Handle Report communication

- Prepare email intent with attached images for reporting crimes
- Handle phone call communication for emergency calls

## Task 5: Map Activity

- Persist location data when community report is made.
- Retrieve location information and pin on map interface.
